Dredge Production Capabilities

Please be aware that operating a dredge involves many different variables, some of which we can control, others which we cannot control. Therefore, exact production rates cannot be specifically provided. Rather, these rates are usually provided as production ranges to account for the many different variables involved.

The following information is provided as production capability ranges expressed in cubic meters per hour based on pumping solids concentrations between 15% and 20% by volume. The daily production rate is expressed in cubic meters per day, based on an 8-hour day.

<u>Predator Model</u>	<u>Cubic Meters/Hour</u>	<u>Cubic Meters/Day</u>
1000-10 10 x 10	133-222	1,064-1,776
2000-12 14x12	199-332	1,592-2,656
2000-14 16x14	242-403	1,936-3,224
3000-16 18x16	318-531	2,544-4,248
3000-18 20x18	407-677	3,256-5,416
4000-20 22x20	510-850	4,080-6,800
